

Alpine Vision

Consent form for Retinal Photography

As you know, part of your routine eye exam includes an examination of your retina. Occasionally, this can be done without dilation. However, more often than not, dilation is required to see adequately all the necessary anatomical structures, as well as to determine the incidence of Glaucoma, Macular Degeneration, Diabetic Retinopathy, and many other eye disorders.

Alpine Vision now offers Retinal Photography using the new Canon CR-DGI digital retinal camera in lieu of most eye dilations. Retinal photography not only performs the crucial visualization of the retina in its entirety, but it can be performed on patients of *any* age. The photograph becomes an instant part of your medical record, and you may request a copy for yourself if you so desire. And the best part of all... **No Drops Required!**

There is an additional fee of **\$29** if you wish to have this service performed. Please indicate below if you would like to have this **quick and painless** procedure today!

- Yes, I would like to have Retinal Photography done today.
- No, I do not wish to have Retinal Photography done today.
